RELEASE NOTES FOR BUILD 137

Software Build Issues Fixed:

New Features Added:

The firmware update program for IntelliFile 3 has been updated with a new look and features. Firmware Update 2.0 has a splash screen that allows the programmer to choose either the Firmware Update Wizard or a Manual operation of the Firmware Update process. The Firmware Update Wizard automates the update process by comparing the firmware versions in the IntelliControl ICS products against what they should have. The Wizard will only update the IntelliControl ICS product that need to be updated. The Wizard will show the programmer each type of products that it is updating; User Interfaces, gateways, video chassis (VS-6), slave audio chassis with their IM-Audio cards (GXR-2) and then master audio chassis with their source cards. The Manual update mode of Firmware Update 2.0 should be used by those that need to update individual items as they see fit. Usually the manual Firmware Update mode will be used by those who are instructed by Niles Technical support.

IntelliFile 3 now supports the IntelliControl ICS iRemoteTS and its integration with the IntelliControl ICS Modular MultiZone System products as well as Niles products; HT-MSU and RFG. The iRemoteTS supports both multi-zone and home theater integration.

IntelliFile 3 now supports the multiple operational modes of the Niles RFG when it is used with the IntelliControl ICS products. The Niles Radio Frequency Gateway (RFG) is a ZigBee transceiver that can be configured as a Master RF base, Repeater RF base or as an Endpoint allowing the installer to create a “quasi-wireless” keypad out of any of the IntelliControl ICS Control Keypads; Contact, ContactTT, Display or Single. This “wireless” keypad doesn’t require a CAT-5 cable connection between the control keypad and the GXR2 Modular MultiZone Receiver. Please refer to the IntelliControl ICS System Design Guide available online at www.intellicontrol.com for more information.

IntelliFile 3 now supports the resizing of images for use with the IntelliControl ICS iRemoteTS. Images can be used for customizing the Splash screen and Favorite Icons shown in the touch screen area of the iRemoteTS. Please refer the readme.txt text file located in the folder IntelliFile3 created when installing the software for further information about the image resizing utility.

IntelliFile 3 build 118 had two IR library programs, one for multi-zone and one for home theater. These have been integrated into one program called Library Manager. Library Manager also has an IR Waveform editing tool that will allow programmers to edit pulses and/or repeats from IR codes. Please refer the readme.txt text file located in the folder IntelliFile3 created when installing the software for further information about the IR Waveform Editing utility.

User Interface Device

- Numerous fixes that address functionality and reliability
- All control keypads can be configured as endpoint keypads using the Niles RFG
- iRemote now has power save mode defaulted to 5 minutes from the never setting

Source Card

- IM-S-Escent now shows all play modes when configured for DVDM100
- IM-iCard increased communication speed with iPod
- IM-Audio Favorites now show properly with no blank pages

IntelliFile3

- Numerous fixes that address functionality and reliability
- Added support for configuring iRemoteTS for both multi-zone and home theater configurations

Home Theater

- HT-MSU now supports iRemoteTS configurations
- iC2 System fixes IR repeat code being issued from HT-MSU

ICS Firmware Update

- Firmware update will now update New Niles products RFG and iRemote TS (this is the first IntelliFile3 build that supports iRemote TS and is therefore required)
- Firmware Update has a new interface with a Wizard and Manual Mode
