Subject: Use Of New IR Sensors With Older MSU

Page 1 of 1

Niles will soon begin filling orders for the new line-up of IR Sensors, Main System Units and Flashers. It is possible to use the new sensors with the older IR MSUs such as the IRP-2+ and the IRP-6+. However, to maximize sensor performance it is necessary to connect a 150 ohms resistor across the ground and data terminals on the sensor input of the Main System Unit as shown in the photograph below. Remember, this only applies when using a *new* sensor on an *old* MSU.

Should you have any questions, please feel free to contact Niles Technical Support at 1-800-289-4434 between the hours of 8am and 7pm Eastern Time, Monday through Friday.
