---

Niles will soon introduce the ZR-8630AV multi-zone receiver. When installing and programming the initial version (Version 1.05<sup>1</sup>) you may have difficulty properly managing the ON and OFF power state of video source components that have a constant video output signal regardless of their ON and OFF state (i.e. some digital cable boxes and high definition satellite receivers).

An engineering change is being implemented in a future version of the ZR-8630AV (Version 2.00) to accommodate such components. With the initial version it is best to leave such components on at all times if they have a toggle power command. If the component has discreet ON and OFF power commands it can be programmed to turn ON and OFF using the following method.

1. Program the component's discrete ON and OFF commands into the ZR-8630AV as described in the installation and operation guide.
2. Program the component's discrete ON command to an unused Function Key located on the same Master Key page that corresponds to the component.
3. Include this Function Key with the discrete ON command as the first step in the sequence for the Master Key that corresponds to the component.

Should you have any questions, please feel free to contact Niles Technical Support at 1-(800) 289-4434 between the hours of 8am and 7pm Eastern Time, Monday through Friday.
