Subject: Sirius/ XM Radio Pre-wire

Page 1 of 1

Niles recently announced alliances with XM and Sirius Radio that will allow the inclusion of their satellite receivers in future Multi-Zone products. As a result, we have been getting requests for information regarding how to best provide for future use of this feature while in the pre-wire phase of new projects.

Cable should be run from the antenna location back to the home run or equipment location. The prescribed cable is RG-58, 50-ohm coaxial cable. Since the possibility exists that several different types of satellite radio receiver may be used in the same system, it is recommended that as many as three separate runs of cable be installed.

Should you have any questions, please feel free to contact Niles Technical Support at 1-800-289-4434 between the hours of 8am and 7pm Eastern Time, Monday through Friday.
